

## **An early stage researcher (ESR) position is available at Universidad Rey Juan Carlos and ProPhotonix as part of the Marie Curie Industrial Doctorate project “REWATERGY”**

PhD student (3 years). *ESR 7 – UV-C LED emitters: Design and simulation challenges.*

REWATERGY is a Marie Curie European Industrial Doctorate (EID) training network funded by the European Commission within the Horizon 2020 research and innovation action. The REWATERGY programme aims to develop an academic-industrial partnership within the water-energy nexus.

Three research objectives set the foundation of this ambitious programme:

- Enhance the energy recovery from wastewater streams inspired by the *circular economy* concept.
- Improve the *energy efficiency* of water disinfection and removal of contaminants of emerging concern.
- Increase the *resilience* of distributed household safe drinking water systems addressing potential health and safety challenges.

The REWATERGY network comprises 3 universities (Universidad Rey Juan Carlos, Spain; University of Cambridge, UK; and Ulster University, UK) and 3 companies (Deft IMP, Netherlands, ProPhotonix, Ireland; and FCC Aqualia, Spain). The consortium is recruiting 8 highly motivated PhD candidates, providing inter-sectoral training, which will qualify them for a career in academia and/or industry. Each ESR will crucially gain inter-sectoral experience in an individual ESR research project, with the main working period (36 months) of the ESR equally split into an academic and an industrial part of 18 months at 2 different countries.

This PhD student position will be hired by:

- ProPhotonix (Cork, Ireland). 18 months (1<sup>st</sup> October 2019 – 31<sup>st</sup> March 2021).
- Universidad Rey Juan Carlos (Madrid, Spain). 18 months (1<sup>st</sup> April 2021 – 30<sup>th</sup> September 2022).

### **Description of the work:**

This PhD student position offers an exciting and innovative research project for the design and development of a novel UV-C LED emitter. In ProPhotonix, the ESR will carry out the following tasks: i) Evaluation and control of parameters affecting optics, electronics and thermal management to overcome current challenges in designing UV-C LED emitters; ii) design of a fully functioning UV-C LED emitter prototype; iii) construction of a prototype system with integrated power supply and heat sink, enhancing reliability and robustness; and iv) optimisation of UV-C LED emitters with optimal wavelengths to be absorbed by DNA and emerging contaminants (ECs). At Universidad Rey Juan Carlos, the ESR will be focused on a mechanistic modelling and simulation of high flux UV-C disinfection processes and its application to the simultaneous removal of relevant emerging contaminants (ECs). Predicted data will be validated by laboratory experiments. The ESR will be trained in simulation of radiation transport and heat transfer, together with analytical techniques for the quantification of emerging contaminants and microorganisms in water.

## Requirements:

- Candidate should be in the first four years of his/her research career. He/she should not have a doctoral degree and fulfil the eligibility criteria and mobility rule (see below).
- A Master degree in mechanical engineering, electronics engineering, chemical engineering, physics or other fields relevant to project activities.
- Experience with CAD packages (preferably Solid Edge) along with knowledge of standard machining/manufacturing processes.
- Additional knowledge or experience in thermal analysis, optics, PCB design, microelectronic packaging, electronics or machine vision would be an advantage.
- Problem solving skills and ability to work both as part of the team, and independently, coupled with excellent communication and organisational skills.
- Fluency in oral and written English.
- Availability to travel for training events and research secondments.
- The standing needed to meet the graduate admissions entrance requirements of Universidad Rey Juan Carlos International Doctoral School, as the successful candidate will be expected to formally apply for admission:

<https://www.urjc.es/en/international/international-students/1219-international-doctoral>

**ELIGIBILITY CRITERIA:** Recruiting is in accordance with the European rules for Marie Curie Initial Training Networks. Early-stage researchers (ESR) can be of any nationality. They must be, at the time of recruitment by the host organisation, in the first four years (full-time equivalent) of their research careers and have not yet been awarded a doctoral degree. The research career starts after the degree that enables a student to proceed with a PhD (usually, the Master degree).

**MOBILITY RULE:** At the time of the recruitment by the first host institution, the ESRs must not have resided or carried out their main activity (work, studies, etc.) in the country of their first host institution for more than 12 months in the 3 years immediately before the recruitment date. Short stays such as holidays and/or compulsory national service are not taken into account.

## Benefits

- 3 years full time employment contract (starting 1<sup>st</sup> October 2019) corresponding to two 18 months contracts, one with each host.
- Attractive salary according to the living standards of the hosting country (Ireland gross salary 3947.83 EUR/month including mobility allowance, taxation of 20-40% depending on individual and familiar circumstances; Spain gross salary 2760 EUR/month including mobility allowance, taxation of 15-18% depending on individual and familiar circumstances). Candidates should get information about the tax requirements associated to each country and their personal circumstances.
- Work in a dynamic and international research group of Chemical and Environmental Engineering – see details on the website: [http://www.giga.es/index\\_english.php](http://www.giga.es/index_english.php)
- Work in an innovative company: <https://www.prophotonix.com>
- Participation in an innovative PhD training program.
- Possibility to collaborate with international research groups engaged in the project.

## **How to apply**

Step 1: Send your complete application before 26<sup>th</sup> April (first phase) or 31<sup>th</sup> May (second phase) filling this form:

<http://rewatergy.eu/esr-application-form/>

A single pdf file needs to be submitted including:

- a cover letter, stating your research motivation and interests; including relevant background (max 1 A4 page)
- at least 2 referees (including name, position and email address) (max 1 A4 page)
- CV, including academic background, previous industrial and/or research experience (max 2 A4 pages).
- Degree transcripts.
- English language qualification certificates

Step 2: After interview and only if your application is accepted, you will need to formally apply to a position at Universidad Rey Juan Carlos and its International Doctoral School.
